

# Switches & Automation

## 1. Modular Switches

- ❖ Switches are the most prominent electrical accessory that we see in a house. Technically a switch is an electrical component that can break electrical circuit by interrupting the current or diverting it from one conductor to another. There are different types of electrical switches based on Current (Ampere) rating varying for 6A to 32A. Today modular switches are available in different colours and designs to go with our modular home or office.
- ❖ List of products:

## 2. Modular Sockets

- ❖ **Electrical socket** is a device where an electrical plug can be inserted to make a connection in a circuit. **Power socket** is used for higher currents like 16A or above and light sockets for standard 6A. For electronic objects like refrigerator a 16A Socket is recommend where for an Air Conditioner a heavier 25A or 32A power socket is used. A new socket available is 6A/13A International socket, which offers compatibility to Indian as well as International Gadgets plug tops.
